                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mgrusak@bem.tmc.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propogated in XLOLR cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Michael A. Grusak
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in liquid nitrogen. Pod walls were pooled for mRNA extraction. cDNA was prepared from polyA+ enriched RNA. The CDNA was directionally liquied into the Unizap XR vector from Stratagene and packaged using Gigapack III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Xhof: Immature pods, ranging in age from 15 to 30 days after pollination, were collected from greenhouse-grown plants. At harvest, seeds were removed from pods and isolated pod walls were collected and immediately frozen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          days after pollination"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Run on:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-766-113-2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Young, G.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Roy, A., Santos, R., Schauer, S., Severy, P., Spencer, B.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        * consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the tinished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://ftp.genome.washington.edu/RM/RepeatMasker.html

                                                                                                                                                                                                                                                                        Root-preferred promoter element, RPE, abiotic stress; drought; salinity; pesticide resistance; herbicide resistance; biotic stress; disease resistance; runqal disease; bacterial disease; viral disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A plant root-preferred promoter element (RPE),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RPES are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to achieve a desired phenotypic effect, e.g. abjoils stress (drought, temperature, salinity, pesticide and herbicide resistance) and biotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (ROL). The invention concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, tlanked by 5° and 3° tlanking sequences, which hybridise to tissue-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying an isolating tissue-preferred promoter elements -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          misc_teature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (RCL). The invention concerns a method of identitying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, flanked by 5' and 3' flanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the compress and PCR approximately and the complexes and PCR approximately and the complexes and PCR approximately and possible to the complexes and PCR approximately and the complexes and PCR approximately approximately approximately approximately and PCR approximately approximately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 5; Fig 1; 45pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tissur-specific promoters from plants, including but not limited to root-specific promoters or root-preferred promoter elements (RPE). The RPEs are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to achieve a desired absorbed the sequence whose expression is to be controlled to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ¥. □

achieve a desired phenotypic effect, e.g. abiotic stress (drought, temperature, salinity, pesticide and herbicide resistance) and biostress (disease resistance, resistance to attack by fungi, bacteri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            root-specific promoters or root-preferred promoter elements (RPE). The RPEs are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          elements comprising the use of a mixture of random cligonucleotides, flanked by 5° and 3° flanking sequences, which hybridise to tissuespecific plant nuclear proteins, isolating the complexes and PCR amplifying the bound oligonucleotide. The method is used for isolating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleoride library (ROL). The invention concerns a method of identifying and isolating tissue-preferred promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying an isolating tissue-preferred promoter elements -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   salinity, posticide resistance, herbicide resistance, biotic stress: disease resistance; fungal disease, bacterial disease; viral disease; insect attack; nematode attack; RPE33; random oliquonucleotide library;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; Fig 1; 45pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21-JAN-2000; 2000US-0177473
                                                                                                                                                                                                                                                                                                                                                                          viruses, insects and nematodes).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tissue-specific promoters from plants, including but not limited to

                                                                                                                                                                                                                                                                     amplifying the bound oligonucleotide. The method is used for isolating tissue-specific promoters from plants, including but not limited to root specific promoters or root-preferred promoter elements (RPE). The RPEs are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to
                                                                                                                                                                                                                          temperature, salinity, pesticide and herbicide resistance) and biotic stress (disease resistance, resistance to attack by fungi, bacteria,
                                                                                                                                                                                                                                                                                                                                                                           The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleother library (80L). The invention concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, clinical promoter oligonucleotides, and 3/ flanking sequences, which hybridise to tissue-sequences is a plant random representation (solation to be compared promoted by 5/ and 3/ flanking sequences, which hybridise to tissue-

root-specific promoters or root-preferred promoter elements (RPE). The RPEs are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled achieve a desired phenotypic effect, e.g. abiotic stress (drought, temperature, salinity, pesticide and herbicide resistance) and biotic
                                                                                                                                                                                                                                                                                                                                                                                                  The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (ROL). The invention concerns a method of identifying and isolating dissour-preferred promoter elements comprising the use of a mixture of random oligonucleotides, flanked by 5' and 3' flanking sequences, which hybridise to tissuespecific plant nuclear proteins, isolating the complexes and PCB amplifying the bound oligonucleotide. The method is used for isolating tissue-specific promoters from plants, including but not limited to tissue-specific promoters from plants, including but not limited to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     salinity; pesticide resistance; herbicide resistance; biotic stress; disease resistance; fungal disease; bacterial disease; viral disease; insect attack; nematode attack; RPEF3; random oligonucleotide library;
                                                                                                                           stress (disease resistance, resistance to attack
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       expression of nucleotide sequences in a plant comprises identifying isolating tissue-preferred promoter elements -  \frac{1}{2} \left( \frac{1}{2} \right) = \frac{1}{2} \left( \frac{1}{2} \right) \left( \frac{1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A plant root-preferred promoter element (RPE), RPE 73
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; Fig 1; 45pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ROL;
achieve a desired phenotypic effect, e.g. abiotic stress (drought temperature, salinity, pesticide and herbicide resistance) and biostress (disease resistance, resistance to attack by fungi, bacter)
                                                                                                         The sequence represents a plant root-preferred promoter element, RPE isolated from a random oligonucleotide library (ROL). The invention concerns a method of identifying and isolating tissue-preferred prome elements comprising the use of a mixture of random oligonucleotides, flanked by 5' and 3' flanking sequences, which hybridise to tissuespectic plant nuclear proteins, isolating the complexes and PCR amplifying the bound oligonucleotide. The method is used for isolating applications are sequenced.
                                                                                                                                                                                                                                                               Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying and isolating tissue-preferred promoter elements \cdot

Best Local :
        concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonuclectides, flanked by 5° and 3° tlanking sequences, which hybridise to tissuespecific plant nuclear proteins, isolating the complexes and PCK
                                                                                                                                   Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying an isolating tissue-preferred promoter elements -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (ROL). The invention concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, flanked by 5 and 3' flanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the nomplexes and PCR amplifying the bound oligonucleotide. The method is used for isolating tissue-specific promoters from plants, including but not limited to root-specific promoters from plants, including but not limited to root-specific promoters or root-preferred promoter elements (RPE). The RPES are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to achieve a desired phenotypic effect, e.g. abiotic stress (disease resistance, registance to attack by fungi, bacteria, reference in the sequence of the controlled to achieve the second stress of the controlled to achieve a controlled to achieve a serious stress (disease resistance, registance to attack by fungi, bacteria,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Root-preferred promoter element; RPE; abiotic stress; drought; stalinity; pesticide resistance; biotic stress; distance; consistance; fingal discose; bacterial discose; viril discose; insect attack; nematode attack; RPE32; random oligonucleotide library
                                                                                                                                                                                                                                                                                       mise_teature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (ROL). The invention concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, tlanked by 5' and 3' tlanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the complexes and PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             amplifying the bound oligonucleotide. The method is used for isolatitissue-specific promoters from plants, including but not limited to root-specific promoters or root-preferred promoter elements (RPE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying and isolating tissue-preferred promoter elements -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               elements comprising the use of a mixture of random oligonuclectides, flanked by 5' and 3' flanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the complexes and PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (ROL). The invention concerns a method of identifying and isolating tissue-preferred promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying and
                                                                                                                                                                                                                                                                                                                        A plant root-preferred promoter element (RPE), RPE 71
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 66 BP; 19 A; 11 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tissue-specific promoters from plants, including but not limited to root-specific promoters or root-preferred promoter elements (RPE). The RPEs are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI: 2001-442261/47

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 roof specific promoters or root preferred promoter elements (RPE). The RPES are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonucleotide library (ROL). The invention concerns a method of identitying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, ilanked by 5° and 3° Hanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the complexes and PCR
                                                                                                                                                                                                                                                                  A promoter element or transcription binding site
                                                                                                                                                                                                                                                                                                                 01-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          achieve a desired phenotypic effect, e.g. abiotic stress (drought, temperature, salinity, pesticide and herbicide resistance) and biotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    specific plant nuclear proteins, isolating the complexes and PCR amplifying the bound oligonucleotide. The method is used for isolating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying and

Specifically, sequences which are Likely to encode antiques have been identified and these polypeptides can be used in a vaccine composition against S.aureus intection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound intections. Scaled Sin syndrome, toxic shock skin and surgical wound intections. Scaled Sin syndrome, toxic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the Slaureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the S.aureus DNA sequences allows putative functions to be assigned so that protein encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           stored on computer readable medium and

The invention concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonucleotides, flanked by 5° and 3° flanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the complexes and PCR specific plant nuclear proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       achieve a desired phenotypic effect, e.g. abiotic stross (drought, temperature, salinity, pesticide and herbicide resistance) and bio-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tissue-specific promoters from plants, including but not limited to root-specific promoters or root-preferred promoter elements (RPE). The RPES are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled that the controlled of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying and isolating tissue-preferred promoter elements -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        misc_teature

GENERAL INFORMATION:

APPLICANT: Martinis, Susan A.
APPLICANT: Sassanfar, Mandana
APPLICANT: Kim, Sundhoon
APPLICANT: Loe, Sand Ho
APPLICANT: Schimmel, Paul R.
TITLE OF INVENTION: RECOMBINANT MYCOBACTERIAL METHIONYL-THNA
TITLE OF INVENTION: SYNTHETASE GENES, TESTER STRAINS AND ASSAYS

```
